राजकीय इंजीनियरिंग कॉलेज, अम्बेडकर नगर, उत्तर प्रदेश (224122)

Electrical Engineering Department

Rajkiya Engineering College, Ambedkar Nagar-224122

SEMESTER VII				
Sr. No	Subject	Subject Code	Theory/ Practical	Course Outcomes:
1.	Rural Development Administration & Planning	KHU701	Theory	<p><b>CO1:</b> Students can understand the definitions, concepts and components of Rural Development</p> <p><b>CO2:</b> Students will know the importance, structure, significance, resources of Indian rural economy.</p> <p><b>CO3:</b> Students will have a clear idea about the area development programmes and its impact. <b>CO4:</b> Students will be able to acquire knowledge about rural entrepreneurship.</p> <p><b>CO5:</b> Students will be able to understand about the using of different methods for human resource planning</p>
2.	Departmental Elective-IV	KEE074	Theory	<p><b>CO1:</b> Classify the power quality issues in electrical distribution network</p> <p><b>CO2:</b> Describe the sources of voltage sag and protective devices including voltage regulators, active series compensator and UPS.</p> <p><b>CO3:</b> Describe the different phenomenon causing electrical transients and devices for over voltage protection.</p> <p><b>CO4:</b> Explain the working and application of different type of FACT devices like SSC, SVC, TSC, SSS, TCSC, UPFC.</p> <p><b>CO5:</b> Explain the causes of harmonics, its effect on motor, capacitor, cables and mitigation techniques.</p>
3.	Departmental Elective-V	KEE077	Theory	<p><b>CO1:</b> Describe the relays and different protective schemes.</p> <p><b>CO2:</b> Explain Relay types and its application.</p> <p><b>CO3:</b> Describe types of faults and protection scheme for major components of power system.</p> <p><b>CO4:</b> Describe the circuit breaker operation, testing and types.</p> <p><b>CO5:</b> Explain the electronic relay, microprocessor and computer based protection schemes.</p>

Course Outcome (VII & VIII Sem)

4.	Renewable Energy Resources	KOE074	Theory	
5.	Industrial Automation & PLC Lab	KEE751	Practical	
6.	Mini Project or Internship Assessment	KEE752		
7.	Project I	KEE753		
8.	MOOCs (Essential for Hons. Degree)			
<b>Departmental Elective-IV</b> KEE070: Advanced Micro processors & Micro Controllers KEE071: Energy Conservation and Auditing KEE072: HVDC & AC Transmission KEE073: High Voltage Engineering KEE074: Power Quality and FACTS			<b>Department Elective - V</b> KEE075: Electric drives KEE076: Power System dynamics and Control KEE077: Power System Protection KEE078: Deregulated Power System KEE079: Utilization of Electrical Energy & Electric Traction	

<b>SEMESTER VIII</b>				
<b>Sr. No</b>	<b>Subject</b>	<b>Subject Code</b>	<b>Theory/ Practical</b>	<b>Course Outcomes:</b>
1.	PROJECT MANAGEMENT & ENTREPRENEURSHIP	KHU802	Theory	
2.	Open Elective-III	KOE08X	Theory	
3.	Open Elective-IV	KOE08X	Theory	
4.	Project II	KEE851		
5.	MOOCs (Essential for Hons. Degree)			
<b>OPEN ELECTIVE –III</b> KOE-080 FUNDAMENTALS OF DRONE TECHNOLOGY KOE-081 CLOUD COMPUTING KOE-082 BIO MEDICAL SIGNAL PROCESSING KOE-083 ENTREPRENEURSHIP DEVELOPMENT KOE-084 INTRODUCTION TO SMART GRID KOE-085 QUALITY MANAGEMENT KOE-086 INDUSTRIAL OPTIMIZATION TECHNIQUES KOE-087 VIROLOGY KOE-088 NATURAL LANGUAGE PROCESSING KOE-089 **HUMAN VALUES IN MADHYASTH DARSHAN			<b>OPEN ELECTIVE –IV</b> KOE-090 ELECTRIC VEHICLES KOE-091 AUTOMATION AND ROBOTICS KOE-092 COMPUTERIZED PROCESS CONTROL KOE-093 DATA WAREHOUSING & DATA MINING KOE-094 DIGITAL AND SOCIAL MEDIA MARKETING KOE-095 MODELING OF FIELD-EFFECT NANO DEVICES KOE-096 MODELLING AND SIMULATION OF DYNAMIC SYSTEMS KOE-097 BIG DATA KOE-098 **HUMAN VALUES IN BUDDHA AND JAIN DARSHAN KOE-099 **HUMAN VALUES IN VEDIC DARSANA

## INDUSTRIAL AUTOMATION & PLC LAB [L T P: 0 0 2]

List of Experiments: minimum 10 nos. of experiments to be performed from following sets,

A) Industrial Automation:

1. Study hardware and software platforms for DCS
2. Simulate analog and digital function blocks
3. Study, understand and perform experiments on timers and counters
4. Logic implementation for traffic Control Application
5. Logic implementation for Bottle Filling Application
6. Tune PID controller for heat exchanger using DCS
7. FBD for auto-clavable laboratory fermenter
8. Develop graphical user interface for the fermenter plant

B) PLC

1. Study hardware and software used in PLC
2. Implementation Logic Gates
3. Implementation of DOL Starter
4. Implementation of On-Delay Timer
5. Implementation of Off-Delay Timer
6. Implementation of Up-Down Counter
7. Implementation of PLC Arithmetic Instructions
8. Implementation of PID Controller

Note: - virtual lab links:

For Industrial Automation:

## ADVANCED MICRO PROCESSORS & MICRO CONTROLLERS

**Pre-requisites of course: Digital Electronics**

<b>Course Outcomes:</b>		<b>Knowledge Level, KL</b>
Upon the completion of the course, the student will be able to:		
<b>CO1</b>	Explain the Architecture of 8086, memory segmentation and its mode.	K2
<b>CO2</b>	Describe the Instruction set of 8086, and develop various type of programs.	K2
<b>CO3</b>	Illustrate memory interfacing diagram , and explain various type of interfacing	k3
<b>CO4</b>	Illustrate various modes of processor.	K3
<b>CO5</b>	Explain the architecture of MSP430 and Develop GPIO controlling Program.	K2

### **UNIT1**

8086 architecture-functional diagram, register organization, memory segmentation, programming model, memory address, physical memory organization, pins description, maximum mode and minimum mode signal descriptions.

### **UNIT2**

Instruction formats, addressing modes, instruction set of 8086, simple programs involves data transfer operation, arithmetic operation, logical operation, branch operation, machine control operation, string manipulations, stack and subroutine operations.

### **UNIT3**

Memory interfacing to 8086. Interrupt structure of 8086, interrupt handling, vector interrupt table and interrupt Service routine. Interfacing programmable peripheral interface 8255, Timer IC 8253 and Interrupt controller 8259 to 8086.

### **UNIT4**

Mode of operation of higher order processors: Real mode and protected mode, Real mode and protected mode memory addressing, access right byte, Memory paging, System descriptors, Multi-Tasking & TSS, Block Diagram Of 80286, ARM Processor

### **UNIT5**

**MSP430 Microcontroller:** block diagram, on-chip peripherals ( analog and digital), and Register sets. Instruction set, instruction formats, addressing modes of MSP microcontroller. Memory Mapped Peripherals, programming System registers, I/O pin multiplexing, pull up/down registers, GPIO control. Interrupts and interrupt programming.

### **Text Book:**

1. Ray, A.K. &Burchandi, K.m., “Advanced Microprocessors and Peripherals: Architecture, Programming and Interfacing” Tata Mc.Graw Hill.
2. Renu Sing &B.P.Singh, “Advanced Microprocessors and Microcontrollers” New Age
3. International. 3. Krishna Kant,”Microprocessors and Microcontrollers” PHI Learning.
4. Brey, Barry B. “The INTEL Microprocessors” Pearson Education.
4. John H Davies, “MSP430 Microcontroller Basics” Newnes Publication.

### **Reference Book:**

1. TI MSP430x5xx and MSP430x6xx Family User's Guide.

# ELECTRICAL ENGINEERING

## ENERGY CONSERVATION AND AUDITING

**Pre-requisites of course:** Basic Electrical Engineering, Power System-I & II

<b>Course Outcomes:</b>		<b>Knowledge Level, KL</b>
Upon the completion of the course, the student will be able to:		
<b>CO1</b>	Identify and assess the energy conservation/saving opportunities in different electric system and understand related legislations.	<b>K1</b>
<b>CO2</b>	Identify and assess the energy saving behavior of utilities through implementation of DSM and EMIS.	<b>K1</b>
<b>CO3</b>	Explain energy audit & management and to prepare energy audit report for different energy conservation instances.	<b>K2</b>
<b>CO4</b>	Illustrate the energy audit for Mechanical Utilities.	<b>K3</b>
<b>CO5</b>	Describe cost-effective measures towards improving energy efficiency and energy conservation by implementation of energy efficient technologies.	<b>K2</b>

**UNIT-1: Energy Scenario:** Classification of Energy, Indian energy scenario, Sectorial energy consumption (domestic, industrial and other sectors), energy needs of growing economy, energy intensity, long term energy scenario, energy pricing, energy security, energy conservation and its importance, energy strategy for the future.

**Energy Conservation Act 2001 and related policies:** Energy conservation Act 2001 and its features, notifications under the Act, Schemes of Bureau of Energy Efficiency (BEE) including Designated consumers, State Designated Agencies, Electricity Act 2003, Integrated energy policy, National action plan on climate change, ECBC code for Building Construction.

**UNIT-2: Demand Side Management (DSM):** Concept and Scope of Demand Side Management, Difference between Energy Efficiency and DSM, Evolution of Demand Side Management, DSM Strategy, Planning, Implementation and its application, Customer Acceptance & its implementation issues, National and International Experiences with DSM, UDAY scheme and other government initiatives for DISCOMs.

**Energy Monitoring and Targeting:** Defining monitoring & targeting, elements of monitoring & targeting, data and information-analysis, techniques –energy consumption, production, cumulative sum of differences (CUSUM). Energy Management Information Systems (EMIS)

# ELECTRICAL ENGINEERING

---

**UNIT-3: Energy Audit:** Aim of energy Audit, Strategies of Energy Audit, Energy management Team Consideration in implementing energy conservation Programme, Process flow diagram, Energy Audit report format, Benchmarking and Energy Performance, Instruments for energy audit, Economic analysis.

**UNIT-4: System Audit of Mechanical Utilities:** Pumps, types and application, unit's assessment, improvement option, parallel and series operating pump performance. Energy Saving in Pumps & Pumping Systems. Blowers (Blowers) types & application, its performance assessment, series & parallel operation applications & advantages. Energy Saving in Blowers Compressors, types & applications, specific power consumption, compressed air system & economic of system changes. Energy Saving in Compressors & Compressed Air Systems Cooling towers, its types and performance assessment & limitations, water loss in cooling tower. Case studies related to Energy Audit & Management in Industries

**UNIT-5: Energy Efficient Technology:** Need for Energy Efficient Devices, Life Cycle Assessment, Comparison between simple pay-back and life cycle cost assessment, Energy Efficient Motors-motor losses and loss reduction techniques, determining and comparing motor efficiencies, motor efficiency testing standards, BIS specification for Energy Efficient Motors, efficiency as a function of load, Energy Efficient Lighting Sources-compact fluorescent lamp, light emitting diode, LED lamp, role of voltage on the efficiency of lighting system, Importance of Automatic power factor controllers, Variable Frequency Drives.

## **Reference Books:**

1. Energy Conservation Guidebook, Dale R Patrick, Stephen W Fardo, 2nd Edition, CRC Press
2. Handbook of Energy Audits, Albert Thumann, 6th Edition, The Fairmont Press
3. Energy Management Handbook, W.C. Turner, John Wiley and Sons, A Wiley Interscience publication
4. Carbon Capture and Sequestration: Integrating Technology, Monitoring, and Regulation edited by E J Wilson and D Gerard, Blackwell Publishing
5. Heating and Cooling of Buildings -Design for Efficiency, J. Krieder and A. Rabl, McGraw Hill Publication, 1994.

## HVDC & AC TRANSMISSION

**Pre-requisites of the course:** Power System-I & II

Course Outcome U No.	Statement	Knowledge Level, KL
N I CO1	Describe the comparison of EHVAC and HVDC transmission while understanding various issues related to transmission.	K1
T CO2	Calculate and study the corona loss and its impacts. Cite examples of the causes of switching overvoltage, Ferro-resonance.	K3
I : CO3	Explain the generation and measurement circuits for impulse, high DC & AC voltages. While considering the design parameters evaluate the effect on the performance of the EHV lines.	K2
N e e d CO4	Classify the DC links and choice of converter configuration to investigate the impact of inductance on operation of converters and identify different control schemes as well as starting and stopping methods of DC links.	K4
o CO5	Describe the converter faults, protections including MTDC types and applications .	K2

**UNIT-I:** EHV transmission, standard transmission voltage, comparison of EHV AC & DC transmission systems and their applications & limitations, surface voltage gradients in conductor, distribution of voltage gradients on sub-conductors, mechanical considerations of transmission lines, modern trends in EHV AC and DC transmission, UHVAC transmission system.

**UNIT-II:** EHV AC Transmission: Corona loss formulas, corona current, audible noise – generation and characteristics corona pulses their generation and properties, radio interference (RI) effects, over voltage due to switching, ferro-resonance, reduction of switching surges on EHV system, principle of half wave transmission.

**UNIT-III:** Extra High Voltage Testing: Characteristics and generation of impulse voltage, generation of high AC and DC voltages, measurement of high voltage by sphere gaps and potential dividers.

Consideration for Design of EHV Lines: Design factors under steady state limits, EHV line insulation design based upon transient over voltages. Effects of pollution on performance of EHV lines.

**UNIT-IV:**EHV DC Transmission – I: Types of dc links, converter station, choice of converter configuration and pulse number, effect of source inductance on operation of converters, working principle and characteristics of a 6 pulse converter with two & three valve conduction mode, three valve conduction mode and three and four valve conduction mode, Principle of DC link control, converter controls characteristics, firing angle control, current and excitation angle control, power control, starting and stopping of DC link.

**UNIT-V:**EHV DC Transmission – II: Converter faults, protection against over currents and over voltages, smoothing reactors, generation of harmonics, AC and DC filters, Multi Terminal DC systems (MTDC): Types, control, protection and applications.

7. "EPRI, Transmission Line Reference Book, 345 KV and above" Electric Power Research Institute. Palo Alto, California, 1982.

# ELECTRICAL ENGINEERING

## HIGH VOLTAGE ENGINEERING

**Pre-requisites of course: Power System-I and II**

<b>Course Outcomes:</b>		<b>Knowledge Level, KL</b>
Upon the completion of the course, the student will be able to:		
<b>CO1</b>	Describe conduction and breakdown phenomenon in gases, liquid dielectrics and solid dielectrics.	K1
<b>CO2</b>	Explain generation of high voltages and currents	K2
<b>CO3</b>	Explain measurement techniques for high voltages and currents	K2
<b>CO4</b>	Describe overvoltage phenomenon and insulation coordination in electric power systems.	K2
	Describe non-destructive testing of materials and electric apparatus and high-voltage testing of electric apparatus	K2

**UNIT-I:** Conduction and Breakdown in Gases:

Gases as Insulating Media, Collision Process, Ionization Processes, Townsend's Current Growth Equation, Current Growth in the Presence of Secondary Processes, Townsend's Criterion for Breakdown, Experimental Determination of Coefficients  $\alpha$  and  $\gamma$ , Breakdown in Electronegative Gases, Time Lags for Breakdown, Streamer Theory of Breakdown in Gases, Paschen's Law, Breakdown in Non-Uniform Fields and Corona Discharges.

Conduction and Breakdown in Liquid Dielectrics: Liquids as Insulators, Pure Liquids and Commercial Liquids, Conduction and Breakdown in Pure Liquids, Conduction and Breakdown in Commercial Liquids.

Breakdown in Solid Dielectrics: Introduction, Intrinsic Breakdown, Electromechanical Breakdown, Thermal Breakdown.

**UNIT-II:** Generation of High Voltages and Currents:

Generation of high direct current voltages, generation of high alternating voltages, generation of impulse voltages, generation of impulse currents, tripping and control of impulse generators.

**UNIT -III:** Measurement of High Voltages and Currents:

Measurement of high direct current voltages, measurement of high alternating and impulse voltages, measurement of high direct, alternating and impulse currents, Cathode Ray Oscillographs for impulse voltage and current measurements.

# ELECTRICAL ENGINEERING

---

## **UNIT-IV: Overvoltage Phenomenon and Insulation Coordination in Electric Power Systems**

Natural Causes for Overvoltages - Lightning Phenomenon, Overvoltage due to Switching Surges, System Faults and Other Abnormal, Principles of Insulation Coordination on High Voltage and Extra High Voltage Power Systems.

## **UNIT-V: Non-Destructive Testing of Materials and Electrical Apparatus**

Measurement of dielectric constant and loss factor, partial discharge measurements

High Voltage Testing: Testing of insulators and bushings, testing of isolators and circuit breakers, testing of cables, testing of transformers, testing of surge arresters, radio interference measurements.

### **Text Books:**

## POWER QUALITY AND FACTS

**Pre-requisites of the course:** Power System-I & II

Course Outcome		Knowledge Level
Upon the completion of the course, the student will be able to:		
CO1	Classify the power quality issues in electrical distribution network	K2
CO2	Describe the sources of voltage sag and protective devices including voltage regulators, active series compensator and UPS.	K1
CO3	Describe the different phenomenon causing electrical transients and devices for over voltage protection.	K2
CO4	Explain the working and application of different type of FACT devices like SSC, SVC, TSC, SSS, TCSC, UPFC.	K2
CO5	Explain the causes of harmonics, its effect on motor ,capacitor, cables and mitigation techniques.	K2

### **Unit-I: Introduction to Power Quality:**

Terms and definitions of transients, Long duration Voltage Variations: under Voltage, Under Voltage and Sustained Interruptions; Short Duration Voltage Variations: interruption, Sag, Swell; Voltage Imbalance; Notching D C offset, waveform distortion; voltage fluctuation; power frequency variations.

### **Unit-II: Voltage Sag:**

Sources of voltage sag: motor starting, arc furnace, fault clearing etc; estimating voltage sag performance and principle of its protection; solutions at end user level- Isolation Transformer, Voltage Regulator, Static UPS, Rotary UPS, and Active Series Compensator.

### **Unit-III: Electrical Transients:**

Sources of Transient Over voltages- Atmospheric and switching transients- motor starting transients, pf correction capacitor switching transients, ups switching transients, neutral voltage swing etc; devices for over voltage protection.

### **Unit-IV: FACT Systems:**

Introduction – Terms & Definition, Fact Controllers, Type of FACT devices i.e. SSC, SVC, TSC, SSSC, TCSC, UPFC Basic relationship for power flow control.

### **Unit- V: Harmonics:**

Causes of harmonics; current and voltage harmonics: measurement of harmonics; effects of harmonics on – Transformers, AC Motors, Capacitor Banks, Cables, and Communication Lines etc., Harmonic Mitigation Techniques.

### **Text Books:**

1. Roger C Dugan, McGrahan, Santoso&Beaty, “Electrical Power System Quality” McGraw Hill
2. Arindam Ghosh & Gerard Ledwich, “Power Quality Enhancement Using Custom Power Devices” Kluwer Academic Publishers

4. S. Sivanagaraju& S. Satyanarayana, “Electric Power Transmission and Distribution” Pearson Education
5. Narain G. Hingorani& Laszlo Gyugyi “Understanding FACTS: Concepts and Technology of Flexible AC Transmission Systems” Wiley

DEPARTMENT  
ELECTIVE – V  
**[L T P: 3 0 0]**

# ELECTRICAL ENGINEERING

## ELECTRIC DRIVES

**Pre-requisites of the course:** Power Electronics, Electrical Machines-I & II

Course Outcome		Knowledge Level
Upon the completion of the course, the student will be able to:		
CO1	Describe the operation of electric drives and its classification.	K1
CO2	Explain the electric drive stability and selection of motor power rating.	K2
CO3	Illustrate electric braking and its dynamics.	K3
CO4	Describe the types of DC drives and its control.	K2
CO5	Describe the types of AC drives and its control.	K2

### **UNIT-I: Fundamentals of Electric Drive:**

Electric Drives and its parts, advantages of electric drives, Classification of electric drives, Speed-torque conventions and multi-quadrant operations, Constant torque and constant power operation, Types of load, Load torque: components, nature and classification.

### **UNIT-II: Dynamics of Electric Drive:**

Dynamics of motor-load combination, Steady state stability of Electric Drive, Transient stability of electric Drive

**Selection of Motor Power rating:** Thermal model of motor for heating and cooling, classes of motor duty, determination of motor power rating for continuous duty, short time duty and intermittent duty., Load equalization.

### **UNIT-III: Electric Braking:**

Purpose and types of electric braking, braking of dc, three phase induction and synchronous motors

**Dynamics During Starting and Braking:** Calculation of acceleration time and energy loss during starting of dc shunt and three phase induction motors, methods of reducing energy loss during starting. Energy relations during braking, dynamics during braking.

### **UNIT-IV: Power Electronic Control of DC Drives:**

Single phase and three phase controlled converter fed separately excited dc motor drives (continuous conduction only), dual converter fed separately excited dc motor drive, rectifier control of dc series motor. Supply harmonics, power factor and ripples in motor current Chopper control of separately excited dc motor and dc series motor.

### **UNIT-V: Power Electronic Control of AC Drives:**

**Three Phase induction Motor Drive:** Static Voltage control scheme, static frequency control scheme (VSI, CSI, and cyclo – converter based) static rotor resistance and slip power recovery control schemes.

# ELECTRICAL ENGINEERING

---

**Three Phase Synchronous motor:** Self controlled scheme

**Special Drives:** Switched Reluctance motor, Brushless dc motor. Selection of motor for particular applications

**Text Books:**

1. G.K. Dubey, "Fundamentals of Electric Drives", Narosa publishing House.
2. S.K.Pillai, "A First Course on Electric Drives", New Age International.

# ELECTRICAL ENGINEERING

## POWER SYSTEM DYNAMICS AND CONTROL

**Pre Requisite-** Electrical Machines-II, Power System-I, Power System-II, Control Systems

Course Outcome		Knowledge Level
Upon the completion of the course, the student will be able to:		
<b>CO1</b>	Explain the fundamental dynamic behavior and controls of power systems to perform basic stability analysis.	<b>K2</b>
<b>CO2</b>	Describe modeling of Synchronous Machine and per unit quantities-Equivalent circuits.	<b>K2</b>
<b>CO3</b>	Describe modeling of main power system components, such as synchronous machines, excitation systems and calculation of Initial conditions	<b>K2</b>
<b>CO4</b>	Illustrate Small signal analysis, synchronizing and damping torque analysis.	<b>K3</b>
<b>CO5</b>	Explain the concept of Power System Stabilizers, Structure & tuning and dynamic compensator analysis.	<b>K2</b>

**UNIT- I: Basic Concepts:** Power system stability states of operation and system security, system dynamics, problems system model analysis of steady State stability and transient stability, simplified representation of Excitation control.

**UNIT- II: Modeling of Synchronous Machine:** Synchronous machine, Park's Transformation-analysis of steady state performance, per unit quantities-Equivalent circuits of synchronous machine determination of parameters of equivalent circuits.

**UNIT- III: Excitation System:** Excitation system modeling-excitation systems block Diagram – system representation by state equations, Dynamics of a synchronous generator connected to infinite bus, system model Synchronous machine model-stator equations rotor equations, Synchronous machine model with field circuit, one equivalent damper winding on q axis, calculation of Initial conditions.

**UNIT- IV: Analysis of Single Machine System:** Small signal analysis with block diagram – Representation Characteristic equation and application of Routh Hurwitz criterion, synchronizing and damping torque analysis-small signal model, State equations.

**UNIT – V: Application of Power System Stabilizers:** Basic concepts in applying PSS, Control signals, Structure and tuning of PSS, Washout circuit , Dynamic compensator analysis of single machine infinite bus system with and without PSS.

### **TEXT BOOKS:**

1. K. R. PADIYAR," Power system dynamics " - B.S. Publications.
2. P.M. Anderson and A. A. Fouad, "Power system control and stability", IEEE Press

### **REFERENCE:**

3. R. Ramanujam, "Power Systems Dynamics"- PHI Publications.

# ELECTRICAL ENGINEERING

## POWER SYSTEM PROTECTION

**Pre-requisites of the course:** Power System-I, Power System-II

Course Outcome		Knowledge Level
Upon the completion of the course, the student will be able to:		
CO1	Describe the relays and different protective schemes.	K1
CO2	Explain Relay types and its application.	K2
CO3	Describe types of faults and protection scheme for major components of power system.	K2
CO4	Describe the circuit breaker operation, testing and types.	K2
CO5	Explain the electronic relay, microprocessor and computer based protection schemes.	K2

### **Unit-I: Protection Scheme**

Need for Protective systems, Evolution of protective relays - Zones of protection - Primary and Back -up Protection - Essential qualities of Protection - Classification of Protective schemes -Automatic reclosing – current transformer for Protection - potential transformer - summation transformer -phase – sequence current - segregating network

### **Unit-II: Relays:**

Electromagnetic, attracted and induction type relays, thermal relay, gas actuated relay, design considerations of electromagnetic relay. Relay Application and Characteristics: Amplitude and phase comparators, over current relays, directional relays, distance relays, differential relay Static Relays: Comparison with electromagnetic relay, classification and their description, over current relays, directional relay, distance relays, differential relay.

### **Unit-III: Protection of Components**

Types & detection of faults and their effects, alternator protection scheme (stator, rotor, reverse power protection etc.) - Power transformer protection (external and internal faults protection), generator-transformer unit protection scheme, bus bar protection - Transmission line protection (current/time grading, distance), Pilot relaying schemes, power line carrier protection.

### **Unit-IV: Circuit Breaking**

Properties of arc, arc extinction theories, re-striking voltage transient, current chopping, resistance switching, capacitive current interruption, short line interruption, circuit breaker ratings. Testing of Circuit Breaker: Classification, testing station and equipment, testing procedure, direct and indirect testing, selection of circuit breakers. constructional features and operation of Bulk Oil, Minimum Oil, Air Blast, SF6, Vacuum and d. c. circuit breakers.

### **UNIT V- Modern Trends in Protection**

Electronic relays - static relays functional circuits: comparators, level detectors, logic and training circuits, microprocessor and computer based protection schemes - software development for protection, security and reliability.

Text Books:

1. S. S. Rao, “Switchgear and Protection”, Khanna Publishers.
2. B. Ravindranath and M. Chander, Power system Protection and Switchgear, Wiley Eastern Ltd.
3. B. Ram and D. N. Vishwakarma, “Power System Protection and Switchgear”, Mc Graw Hill

# ELECTRICAL ENGINEERING

## DEREGULATED POWER SYSTEM

**Pre-requisites of the course:** Power System-I & II

Course Outcome		Knowledge Level
Upon the completion of the course, the student will be able to:		
CO1	Describe the deregulation, unbundling of electric utilities and its benefits.	K1
CO2	Explain the operational planning activities of independent system operator in pool & bilateral markets and describe competitive bidding.	K2
CO3	Explain the open access of transmission line and management of security & congestion in deregulation.	K2
CO4	Describe the different types of Electric traction, system of track electrification and its related mechanics	K2
CO5	Illustrate the Reliability Analysis of Generation, transmission and distribution and the regulation of the market.	K3

**UNIT-I:** Deregulation, Reconfiguring Power systems, unbundling of electric utilities, Background to deregulation and the current situation around the world, benefits from a competitive electricity market after effects of deregulation

**UNIT-II:** Role of the independent system operator, Operational planning activities of ISO: ISO in Pool markets, ISO in Bilateral markets, Operational planning activities of a GENCO: Genco in Pool and Bilateral markets, market participation issues, competitive bidding.

**UNIT-III:** Power wheeling, Transmission open access, pricing of power transactions, security management in deregulated environment, and congestion management in deregulation

**UNIT-IV:** General description of some ancillary services, ancillary services management in various countries, and reactive power management in some deregulated electricity markets.

**UNIT-V: RELIABILITY ANALYSIS:** Interruption criterion, stochastic components, component models, Calculation methods, Network model: stochastic networks, series and parallel connections, minimum cut sets, reliability cost. Generation, transmission and distribution reliability, Reliability and deregulation: conflict, reliability analysis, effects on the actual reliability, regulation of the market.

### **Text Books:**

1. K. Bhattacharya, MHT Bollen and J.C Doolder, "Operation of Restructured Power Systems", Kluwer Academic Publishers, USA, 2001.
2. Lei Lee Lai, "Power System restructuring and deregulation", John Wiley and Sons, UK. 2001.
3. Fred I Denny and David E. Dismukes, "Power System Operations and Electricity Markets", CRC Press, LLC, 2002.
